

# DNSKEY Management

Julien Perrochet   Tobias Schlatter

ITSEC, EPFL, Prof. Janson

December 12, 2012

# Outline

Introduction

Current DNSSEC Deployment

DNSKEY Management

Case-Study: Switzerland

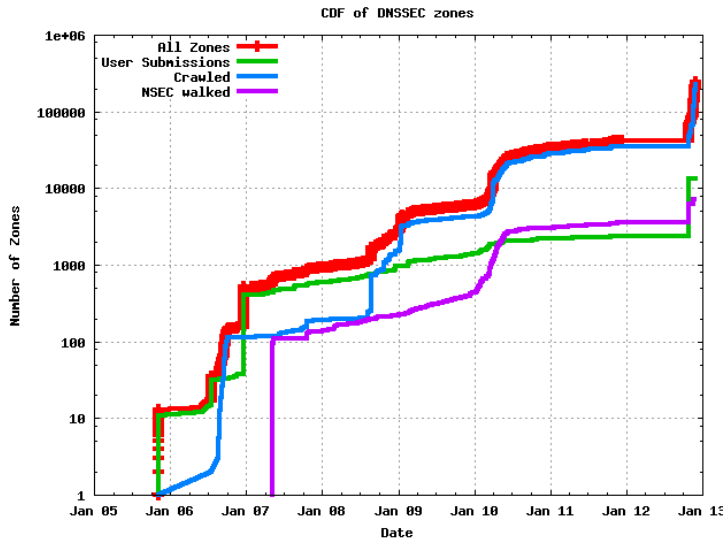

# DNSSEC Chain of Trust

How are DNSKEYs verified?

# DNSSEC Production Zones

How many DNSSEC zones are deployed?

# DNSSEC Certificate Chain

How many are properly signed?

## Root Zone

- ▶ Signed July 15, 2010
- ▶ < 50% zones properly chained

## Trust Anchor Repository

- ▶ Stores trusted keys
- ▶ Orthogonal to DNSSEC key chain

# DNSSEC Certificate Chain

How many are properly signed?

## Root Zone

- ▶ Signed July 15, 2010
- ▶ < 50% zones properly chained

## Trust Anchor Repository

- ▶ Stores trusted keys
- ▶ Orthogonal to DNSSEC key chain

# DNSSEC Certificate Chain

How many are properly signed?

## Root Zone

- ▶ Signed July 15, 2010
- ▶ < 50% zones properly chained

## Trust Anchor Repository

- ▶ Stores trusted keys
- ▶ Orthogonal to DNSSEC key chain

# DNSSEC Certificate Chain

How many are properly signed?

## Root Zone

- ▶ Signed July 15, 2010
- ▶ < 50% zones properly chained

## Trust Anchor Repository

- ▶ Stores trusted keys
- ▶ Orthogonal to DNSSEC key chain

# The three Rs

Who's involved?

# DNSKEY Operations

What are the major operations?

## Enable DNSSEC

- ▶ Generate key
- ▶ Parent signs key

## Key Rollover

- ▶ Generate new key
- ▶ Parent signs key
- ▶ Remove old key

## Disable DNSSEC

- ▶ Remove **all** refs to key

# DNSKEY Operations

What are the major operations?

## Enable DNSSEC

- ▶ Generate key
- ▶ Parent signs key

## Key Rollover

- ▶ Generate new key
- ▶ Parent signs key
- ▶ Remove old key

## Disable DNSSEC

- ▶ Remove **all** refs to key

# DNSKEY Operations

What are the major operations?

## Enable DNSSEC

- ▶ Generate key
- ▶ Parent signs key

## Key Rollover

- ▶ Generate new key
- ▶ Parent signs key
- ▶ Remove old key

## Disable DNSSEC

- ▶ Remove **all** refs to key

# DNSKEY Operations

What are the major operations?

## Enable DNSSEC

## Disable DNSSEC

- ▶ Remove **all** refs to key

# Situation in Switzerland

## SWITCH

### Deployment

- ▶ ch. zone securely delegated
- ▶ Very low penetration (370 / 1.7 mio.)
- ▶ DNSSEC for free

### Key Management

- ▶ Enable/Disable keys in web-interface
- ▶ Partners (Registrars): EPP

# Situation in Switzerland

# Conclusion

## Comments

- ▶ Most management issues solved
- ▶ DNSKEY management not relevant enough for course

¿Questions?
